

Stations / Centers How To

- Download the Stations / Centers file which is in PDF format.
- For best results reproduce games on colored card stock. 65lb. card stock works well and can be used in most laser printers, but check the printer / copier manual to verify this weight can be used.
- Once printed and cut out, the materials should be laminated to help make them last longer. You can also use sheet protectors.
- Provide dry erase / overhead markers for the students to use on the laminated or sheet protected game boards.
- When reproducing multiple card decks, use different colors for each deck if possible to help in keeping the decks separate.
- Although card backs are not required on some of the activities, making cards with them will produce a nicer looking deck.
- For activities that require spinners, students can use a paper clip and pen as shown below:
